InSite Applications

There are three applications that can be used along with the software:

- InSite Check-In - used for checking children in and out (staff can also use this application to clock in or out)
- InSite Classroom - used by staff and admins for classroom management
- InSite Parent - used by parents to review their family's activity within a center

The InSite Check-In and InSite Classroom applications can be used with Android or iOS tablets. These applications are not available on cell phones or traditional computers.

The InSite Parent application is only available on iOS or Android mobile devices.
